ZHCSJS2M - NOVEMBER 1997 - REVISED MAY 2019

CDx4HC405x、CDx4HCT405x 高速 CMOS 逻辑模拟 多路复用器和多路信号分离器

1 特性

- 宽模拟输入电压范围: ±5V(最大值)
- 低导通电阻
 - 70Ω (典型值) (V_{CC} V_{FF} = 4.5V)
 - 40Ω(典型值)(V_{CC} V_{EE} = 9V)
- 低开关间串扰
- 快速开关和传播速度
- 先断后合开关
- 宽工作温度范围:
 - -55°C 至 +125°C
- CD54HC 和 CD74HC 类型
 - 工作控制电压: 2V 至 6V
 - 开关电压: 0V 至 10V
- CD54HCT 和 CD74HCT 类型
 - 工作控制电压: 4.5V 至 5.5V
 - 开关电压: 0V 至 10V
 - 直接 LSTTL 输入逻辑兼容性 $V_{IL} = 0.8V$ (最大值), $V_{IH} = 2V$ (最小值)
 - CMOS 输入兼容性 在电压为 V_{OL}、V_{OH}时, I_I ≤ 1μA
- 对于符合 MIL-PRF-38535 标准的产品, 所有参数均经过测试,除非另外注明。对于所有其 他产品,生产流程不一定包含对所有参数的测试。

2 应用

- 数字音频广播
- 信号门控
- 工厂自动化
- 电视
- 电器
- 可编程逻辑电路
- 传感器

3 说明

CDx4HC405x 和 CDx4HCT405x 器件是数字控制的模拟开关,其使用硅栅 CMOS 技术并借助标准 CMOS 集成电路的低功耗特性来实现与 LSTTL 接近的运行速度。

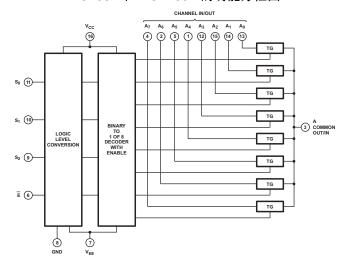

这些模拟多路复用器和多路信号分离器可控制模拟电压,该电压可能会在整个电源电压范围内变化(例如, V_{CC} 变为 V_{EE})。它们是双向开关,可将任何模拟输入用作输出,反之亦然。这些开关具有低导通电阻和低关断泄漏。此外,所有这些器件均具有使能控制,当处于高位时将禁用所有开关,将其置于关断状态。

器件信息⁽¹⁾

| 器件型号 | 封装 | 封装尺寸 (标称值) |
|---------------|------------|------------------|
| CD54HCx405xF | CDIP (16) | 19.56mm × 6.92mm |
| CD74HCx405xE | PDIP (16) | 19.30mm x 6.35mm |
| CD74HCx405xM | SOIC (16) | 9.90mm x 3.91mm |
| CD74HCx405xNS | SOP (16) | 10.30mm × 5.30mm |
| CD74HCx405xPW | TSSOP (16) | 5.00mm × 4.40mm |

(1) 如需了解所有可用封装,请参阅数据表末尾的可订购产品附录。

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

| | | | MIN | MAX | UNIT |
|------------------------------|--------------------------------------|---|------|------|------|
| $\overline{V_{CC} - V_{EE}}$ | DC supply voltage | | -0.5 | 10.5 | V |
| V _{CC} | OC supply voltage | | -0.5 | 7 | V |
| V _{EE} | DC supply voltage | | 0.5 | -7 | V |
| I _{IK} | DC input diode current | $V_{I} < -0.5 \text{ V or } V_{I} > V_{CC} + 0.5 \text{ V}$ | | ±20 | mA |
| I _{OK} | DC switch diode current | $V_I < V_{EE} - 0.5 \text{ V or } V_I > V_{CC} + 0.5 \text{ V}$ | | ±20 | mA |
| | DC switch current ⁽²⁾ | $V_I > V_{EE} - 0.5 \text{ V or } V_I < V_{CC} + 0.5 \text{ V}$ | | ±25 | mA |
| I _{CC} | DC V _{CC} or ground current | | | ±50 | mA |
| I _{EE} | DC V _{EE} current | | | -20 | mA |
| T _{JMAX} | Maximum junction temperature | | | 150 | °C |
| T _{LMAX} | Maximum lead temperature | Soldering 10 s | | 300 | °C |
| T _J | Junction temperature | | | 150 | °C |
| T _{stg} | Storage temperature | | -65 | 150 | °C |

⁽¹⁾ Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

| | | VALUE | UNIT |
|--|--|-------|------|
| | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1) | ±500 | |
| V _(ESD) Electrostatic discharge | Charged device model (CDM), per JEDEC specification JESD22-C101 or ANSI/ESDA/JEDEC JS-002 ⁽²⁾ | ±200 | V |

⁽¹⁾ JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted) (1)

| | | | MIN | NOM MAX | UNIT |
|-----------------------------------|---|--|-----------------|-----------------|------|
| | Supply voltage range | CD54 and 74HC types | 2 | 6 | |
| V _{CC} | (T _A = full package temperature range) ⁽²⁾ | CD54 and 74HCT types | 4.5 | 5.5 | V |
| V _{CC} – V _{EE} | Supply voltage range (T _A = full package temperature range) | CD54 and 74HC types, CD54 and 74HCT types (see Figure 1) | 2 | 10 | V |
| V _{EE} | Supply voltage range (T _A = full package temperature range) ⁽³⁾ | CD54 and 74HC types, CD54 and 74HCT types (see Figure 2) | 0 | -6 | V |
| VI | DC input control voltage | | GND | V _{CC} | V |
| V _{IS} | Analog switch I/O voltage | | V _{EE} | V _{CC} | V |
| T _A | Operating temperature | | – 55 | 125 | °C |
| | | 2 V | 0 | 1000 | |
| t _r , t _f | Input rise and fall times | 4.5 V | 0 | 500 | ns |
| | | 6 V | 0 | 400 | |

⁽¹⁾ For maximum reliability, nominal operating conditions must be selected so that operation is always within the ranges specified in the *Recommended Operating Conditions* table.

⁽²⁾ All voltages referenced to GND unless otherwise specified.

⁽²⁾ JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

⁽²⁾ All voltages referenced to GND unless otherwise specified.

⁽³⁾ In certain applications, the external load resistor current may include both V_{CC} and signal line components. To avoid drawing V_{CC} current when switch current flows into the transmission gate inputs, the voltage drop across the bidirectional switch must not exceed 0.6 V (calculated from r_{ON} values shown in *Electrical Characteristics: HC Devices* and *Electrical Characteristics: HCT Devices* tables). No V_{CC} current will flow through R_L if the switch current flows into terminal 3 on the HC and HCT4051; terminals 3 and 13 on the HC and HCT4052; terminals 4, 14, and 15 on the HC and HCT4053.

6.4 Thermal Information

| | | | CD74HC4051 | | |
|----------------------|--|----------|------------|------------|------|
| | THERMAL METRIC ⁽¹⁾ | N (PDIP) | NS (SO) | PW (TSSOP) | UNIT |
| | | 16 PINS | 16 PINS | 16 PINS | |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 49.0 | 83.0 | 107.7 | °C/W |
| $R_{\theta JC(top)}$ | Junction-to-case (top) thermal resistance | 36.3 | 41.2 | 42.4 | °C/W |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 29.0 | 43.3 | 52.8 | °C/W |
| ΨЈТ | Junction-to-top characterization parameter | 21.2 | 9.2 | 4.2 | °C/W |
| ΨЈВ | Junction-to-board characterization parameter | 28.9 | 43.0 | 52.2 | °C/W |

⁽¹⁾ For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application report.

8 Detailed Description

8.1 Overview

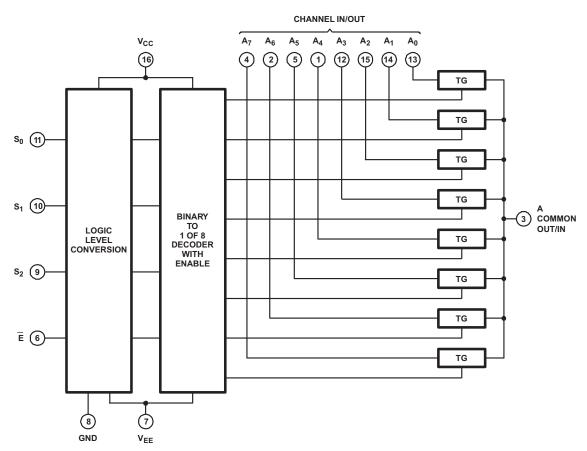

The CDx4HCx4051 devices are a single 8-channel multiplexer having three binary control inputs, S_0 , S_1 , and S_2 and an ENABLE input. The three binary signals select 1 of 8 channels to be turned on, and connect one of the 8 inputs to the output.

The CDx4HCx4052 devices are a differential 4-channel multiplexer having two binary control inputs, S_0 and S_1 , and an ENABLE input. The two binary input signals select 1 of 4 pairs of channels to be turned on and connect the analog inputs to the outputs.

The CDx4HCx4053 devices are a triple 2-channel multiplexer having three separate digital control inputs, S_0 , S_1 , and S_2 and an ENABLE input. Each control input selects one of a pair of channels that are connected in a single-pole, double-throw configuration.

When these devices are used as demultiplexers, the CHANNEL IN/OUT terminals are the outputs and the COMMON OUT/IN terminals are the inputs.

8.2 Functional Block Diagrams

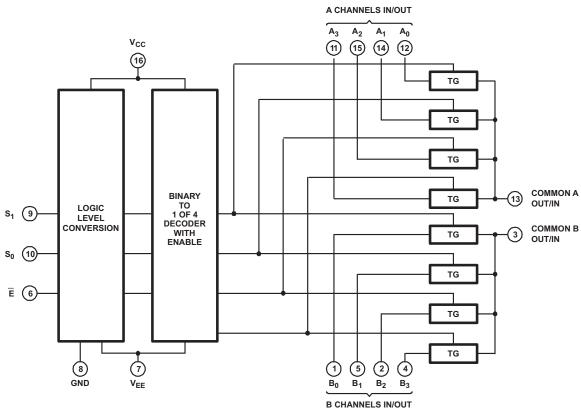

All inputs are protected by standard CMOS protection network.

8.3 Feature Description

The CDx4HCx405x line of multiplexers and demultiplexers can accept a wide range of analog signal levels from -5 to +5 V. They have low ON resistance, typically $70-\Omega$ for $V_{CC}-V_{EE}=4.5$ V and $40-\Omega$ for $V_{C}-V_{EE}=4.5$ V, which allows for very little signal loss through the switch.

Binary address decoding on chip makes channel selection easy. When channels are changed, a break-before-make system eliminates channel overlap.

8.4 Device Functional Modes

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The CDx4HCx405x line of multiplexers and demultiplexers can be used for a wide variety of applications.

9.2 Typical Application

One application of the CD74HC4051 device is used in conjunction with a microcontroller to poll a keypad. Figure 20 shows the basic schematic for such a polling system. The microcontroller uses the channel-select pins to cycle through the different channels while reading the input to see if a user is pressing any of the keys. This is a very robust setup that allows for simultaneous key presses with very little power consumption. It also uses very few pins on the microcontroller. The down side of polling is that the microcontroller must frequently scan the keys for a press.

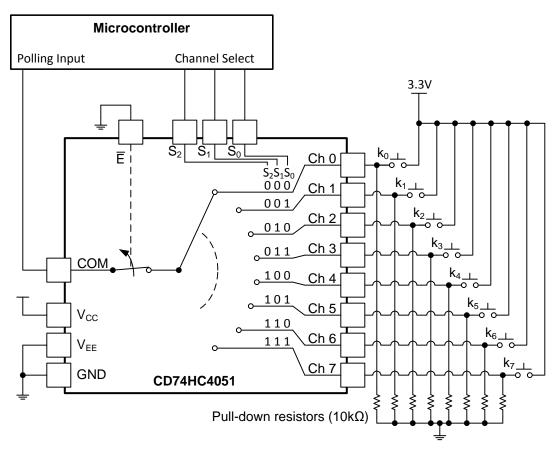

Figure 20. CD74HC4051 Being Used to Help Read Button Presses on a Keypad

9.2.1 Design Requirements

These devices use CMOS technology and have balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads, so routing and load conditions must be considered to prevent ringing.

Typical Application (continued)

See Table 4 for the input loading details.

Table 4. HCT Input Loading Table

| TYPE | INPUT | UNIT LOADS ⁽¹⁾ |
|------------|-------|---------------------------|
| 4051, 4053 | All | 0.5 |
| 4052 | All | 0.4 |

(1) Unit load is ∆I_{CC} limit specified in *Specifications*, for example, 360-mA MAX at 25°C.

9.2.2 Detailed Design Procedure

- 1. Recommended input conditions:
 - For switch time specifications, see propagation delay times in Electrical Characteristics: HC Devices.
 - Inputs must not be pushed more than 0.5 V above V_{DD} or below V_{EE}.
 - For input voltage level specifications for control inputs, see V_{IH} and V_{IL} in *Electrical Characteristics: HC Devices*.
- 2. Recommended output conditions:
 - Outputs must not be pulled above V_{DD} or below V_{EE}.
- 3. Input and output current consideration:
 - The CDx4HCx405x series of parts do not have internal current-drive circuitry, and thus cannot sink or source current. Any current will be passed through the device.

9.2.3 Application Curve

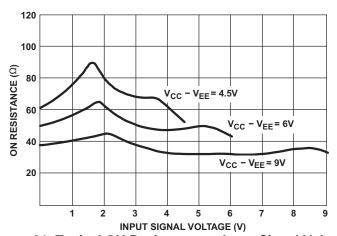

Figure 21. Typical ON Resistance vs Input Signal Voltage

10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Electrical Characteristics: HC Devices*.

Each V_{CC} terminal must have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- μF bypass capacitor is recommended. If there are multiple pins labeled V_{CC} , then a 0.01- μF or 0.022- μF capacitor is recommended for each V_{CC} because the V_{CC} pins will be tied together internally. For devices with dual-supply pins operating at different voltages, for example V_{CC} and V_{DD} , a 0.1- μF bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. A 0.1- μF and a 1- μF capacitor are commonly used in parallel. For best results, the bypass capacitor or capacitors must be installed as close as possible to the power terminal.

11 Layout

11.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a 90° angle, a reflection can occur. This is primarily due to the change in width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This change in width upsets the transmission line characteristics, especially the distributed capacitance and self-inductance of the trace, thus resulting in the reflection. Not all PCB traces can be straight, so they will have to turn corners. Figure 22 shows progressively better techniques of rounding corners. Only the last example (BEST) maintains constant trace width and minimizes reflections.

11.2 Layout Example

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

PACKAGE OPTION ADDENDUM

www.ti.com 28-Sep-2021

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

14 LEADS SHOWN

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. This package is hermetically sealed with a ceramic lid using glass frit.
- D. Index point is provided on cap for terminal identification only on press ceramic glass frit seal only.
- E. Falls within MIL STD 1835 GDIP1-T14, GDIP1-T16, GDIP1-T18 and GDIP1-T20.

N (R-PDIP-T**)

PLASTIC DUAL-IN-LINE PACKAGE

16 PINS SHOWN

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
- The 20 pin end lead shoulder width is a vendor option, either half or full width.

SOP

- 1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing
- per ASME Y14.5M.

 2. This drawing is subject to change without notice.

 3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.

SOF

NOTES: (continued)

- 5. Publication IPC-7351 may have alternate designs.
- 6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOF

NOTES: (continued)

- 7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 8. Board assembly site may have different recommendations for stencil design.

D (R-PDS0-G16)

PLASTIC SMALL OUTLINE

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AC.

D (R-PDSO-G16)

PLASTIC SMALL OUTLINE

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
- E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

SMALL OUTLINE PACKAGE

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

 2. This drawing is subject to change without notice.

 3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
- 5. Reference JEDEC registration MO-153.

SMALL OUTLINE PACKAGE

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SMALL OUTLINE PACKAGE

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.

NS (R-PDSO-G**)

14-PINS SHOWN

PLASTIC SMALL-OUTLINE PACKAGE

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.
